Hiring Manager's Name
Company Address
hiringmanager@gmail.com

Dear Sir/Madam,

Being an earnest and avid learner, I feel I can step into a Data Scientist's role and be an asset for [Company's Name]. Having recently graduated from NIIT University with a specialisation in Data Science, I have knowledge in subjects of Natural Language Processing, Multi Device Programming, Big Data Concepts, Inferential Statistics, Predictive Modelling, Business Analytics and Machine Learning. My academic record with a CGPA of 9.20 supports my inquisitiveness towards new learnings.

My knowledge base comes from a point of various projects that I have worked on through the course of my graduation programme. They have not only enabled me to have hands on experience with some industry based topics but also sharpened my skills acquired during classroom teachings. I can put forth analytical skills, performing multiple tasks, time management skills and effective planning in light of a legitimate concern for the firm. In addition, I possess exemplary verbal and written communication skills. I am a deadline-driven person hence, I get worked up while working in a team if deadlines are not met with efficiency or if tasks are not accelerated on a desired route even on an individual basis.

I am a passionate individual looking to gain immense expertise and experience by getting to work in an organization like [Company's Name]. I hope my resume will provide an insight into my abilities and will help you in determining my competency.

Looking forward to hearing from you.

Yours sincerely,
Ananya Joshi
